FURNACE OR KILN CAR SEALS

It is well documented that having a proper seal on the kiln car saves energy and improves product quality by preventing cool air into the kiln. The Thermal Products Company, Inc. can provide a variety of materials such as ceramic fiber blanket strips. Braids in three different forms are available in both ceramic fiber and fiberglass. Other variations such as tadpole tapes, mesh encased braid, etc., are also available.

Please feel free to contact us for a quotation or for any questions on your high temperature applications.

Available thermal products:

- **S Durablanket**-a 2300F insulation available in densities of 4, 6 & 8#/cf with thicknesses from .25" to 2". We can slit this to any desired width up to 48" although 2", 3", 4" & 6" are the most common. **S Durablanket 2600** is also available.
- **Twisted Rope, Round Braid & Square Braid**-a 2300F textile in these forms from .25" to 2" diameter to fit in channels.
- **Zetex Twisted Rope, Round Braid & Square Braid**-a 1000F textile in these forms from .25" to 2" diameter to fit in channels.
